

Produced by Amy Fensome &

Sample of Scientific evidence on the outcomes of Marine Protected Areas — Each square represents one data point extracted from scientific, peer-reviewed literature. The color of each square shows whether Marine Protected Areas showed positive green, neutral yellow, or negative red outcomes. Darker shades represent stronger evidence. Individual squares are not equal in weight and cannot be added or subtracted. This is not an exhaustive overview of evidence. See next page for references corresponding to the numbers in squares and news.mongabay.com/series/conservation-effectiveness/ for details on methods.
